## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 24-48 are allowed.

The following is an examiner's statement of reasons for allowance: prior art does not teach nor render obvious an in-band-flat-group-delay type dielectric filter that, in combination with other limitations, the auxiliary circuit includes parallel bypass capacitors and series bypass capacitors, two of the series coupling capacitors connect between the adjacent dielectric resonators, each one end of the parallel bypass capacitors is connected to a junction between the two of the series coupling capacitors; and the other ends of the adjacent parallel bypass capacitors are connected to be short circuited or via at least one of the series bypass capacitors; neither does it have the auxiliary circuit includes parallel bypass capacitors and series bypass capacitors, one of the series coupling capacitors connect between the adjacent dielectric resonators, each one end of the parallel bypass capacitors is connected to a junction between the series coupling capacitors; and the other ends of the adjacent parallel bypass capacitors are connected to be short circuited or via at least one of the series bypass capacitors; nor does it have frequency characteristics in group delay have a peak value at a lower edge of a passband in amplitude transfer characteristics and uniform-group-delay frequency characteristics within the passband and in a higher frequency band than an upper edge of the passband, the frequency characteristics in group delay frequency characteristics do not increase from a uniform group delay time

within the passband but decrease; nor does it have a group delay time in a distortion compensation circuit is regulated by the dielectric filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
